🔐 Activity: Designing a Password Policy

Scenario:
Your company has 500 employees. You discovered many users use weak passwords (e.g., "123456").

Tasks:

Define a secure password policy for the organization:

- POLICY:
  This section provides a brief statement of the policy. It outlines what the policy is about and its overall purpose in one or two sentences.

- OBJECTIVE:
  This explains why the policy exists. It describes the goals the policy aims to achieve, such as protecting data integrity, maintaining confidentiality, or complying with regulations.

- SCOPE:
  Defines **who and what** the policy applies to. It can include departments, user groups, systems, applications, and devices.

- REFERENCE:
  Lists any **laws, standards, frameworks, or internal documents** that support or relate to the policy.

- DEFINITIONS:
  Clarifies **key terms** used in the policy. This ensures consistent understanding across the organization.

- GUIDELINES:
  Details the specific **rules or best practices** users must follow. For a password policy, you can include the following:
  - Minimum length:
  - Required character types (symbols, numbers, etc.):
  - Password expiry period:
  - How will passwords be stored securely?

- ADMINISTRATION:
  Outlines **who is responsible** for implementing, enforcing, and reviewing the policy. Also describes how violations will be handled.
